

Metacon AB (publ) approved for listing on Nasdaq First North Growth Market

Metacon AB (public) ("Metacon" or the "Company") has received final approval of the application for listing of Metacon shares on the Nasdaq First North Growth Market. The last day for trading in the Company's shares on NGM Nordic SME is 23 September 2022 and the first day of trading on Nasdaq First North Growth Market will be 26 September 2022 under the ticker META.

Metacon has, as previously communicated, completed a rights issue of shares to the public with a subscription amount of approximately SEK 139 million. At the time of the rights issue, it was also communicated that Metacon had the intention to list its shares on Nasdaq First North Growth Market. The company has today received approval for the listing of its shares on the Nasdaq First North Growth Market.

The first day of trading in the Company's shares will be Monday the 26th of September 2022. The share will be traded with the ticker META and ISIN code SE0003086214.

"We are now entering a new and very exciting phase in Metacon's history. Through the funds from the rights issue before the summer and with the new listing on Nasdaq, we can create better conditions for future development of the company and accelerate our international expansion", commented Christer Wikner, President & CEO of Metacon.

Advisors

In connection with the completion of the list change, Metacon has engaged the law firm Schjødt as legal advisor.

About Metacon AB (publ)

Metacon AB (publ) develops and manufactures energy systems for the production of hydrogen, heat and electricity. The products in the Reforming business area are based, among other things, on a patented technology that generates hydrogen through so-called catalytic steam reforming of biogas or other hydrocarbons. The development of Metacon's reforming products is done within the wholly owned subsidiary Helbio S.A: which is a spin-off from the University of Patra, Greece and was founded by Professor Xenophon Verykios in 2001. From the very beginning, the business has focused on catalysts and advanced reformers for highly efficient hydrogen production.

Metacon also offers complete filling stations for hydrogen and system solutions and facilities for the production of hydrogen through so-called electrolysis, a large and globally growing area for small- and large-scale production of green hydrogen. Electrolysis is a process of starting and driving a chemical reaction

to cleave water by adding electricity. If the electricity used is non-fossil and green, hydrogen will also be completely climate neutral and green. Green hydrogen can be used in, among other areas, the transport sector, the basic industry and the real estate sector with a better environment and climate as a result. www.metacon.com
